

BusAnalyzer

A look inside the CAN bus

The **BusAnalyzer** is a modern, flexible tool for work in CAN networks independent of the manufacturer.

- Visualisation, recording and analysis of CAN signals
- Intuitive operation
 - DockingView-technology
- Configuration of CAN signals
 - dbc-data import
- Large variety of instruments (board-, data-, graphics-, trace-, log- and send instruments)
- Sending of CAN-messages (manually, timed)
- Data recording in ASCII- or binary format (FileSplit possible)
- **Supports the CAN bus components of the manufacturers: cbb, Vector Informatik, IXAT and National Instruments**
